MicroSave Briefing Note # 119

Understanding Demand for Financial Products among the Youth of Central Java

Premasis Mukherjee, Neeraj Lal and Sonmani Choudhary

March 2012

Background

Indonesia has the world's fourth largest youth population, of over 38 million.^{1, 2} But over 20% of this youth are neither in school nor employed, and over 50% of youth in the labour market are unemployed or underemployed.³

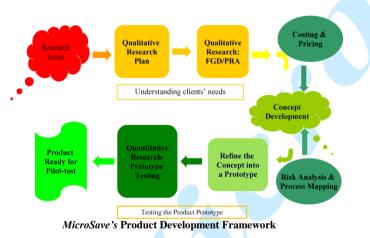

MicroSave was contracted by Plan Indonesia to conduct research to better understand youth and their financial needs.

Research Objective

MicroSave conducted exploratory market research to understand the needs for financial products, and the perceptions of existing financial products, amongst the youth of central Java and to suggest suitable clientresponsive product(s).

Framework of Product Development

MicroSave's product development framework was used to prepare a mix of products responding to a range of market segments.

Research Plan

The research was conducted with the sample size of 400, primarily women, across 6 villages of Grobogan district, using PRA Tools (LCA, PAR, RPR)⁴ and individual interviews.⁵

Key Findings

The following lifecycle needs emerged as predominant financial stress points in the life of the youth:

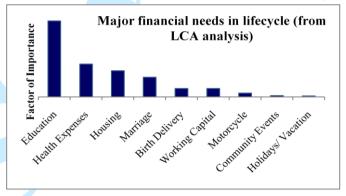

Education: own education for the younger population (substantial amounts are required to enroll in higher

¹ Young women and men between the ages of 15 and 24

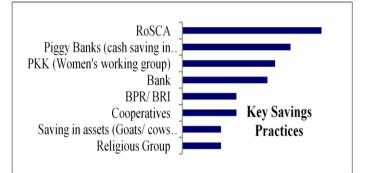

education) and children's education for older population.

Health Expenses: important due to the uncertainty.

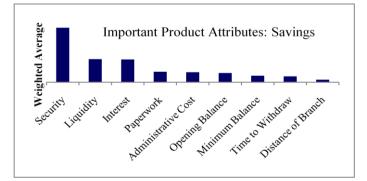

Housing: significant, especially in the 20-25age group. The respondents save both in cash and kind using various mechanisms to meet these needs. However there is an aversion towards formal savings because of account maintenance charges, minimum balance requirements, and the distance of financial institutions from the villages.

Some of the key saving mechanisms are given in the graph below:

The important attributes sought by the youth in savings products are tabulated below:

² Unlocking the Potential of Youth—Indonesia Youth Employment Action Plan. An initiative of the Indonesia Youth Employment Networks supported by the Ministry of Manpower and Transmigration and ILO, 2005 ³ Ibid

⁴ PRA: Participatory Rapid Appraisal; LCA: Life Cycle Analysis; PAR: Product Attribute Ranking. RPR: Relative Preference Ranking

⁵ Refer to *MicroSave*'s <u>MR4MF toolkit</u> for details

Security is the key attribute. Any institute offering savings must be viewed as trustworthy by clients; this is often tied in with the community focus (level of involvement of the community) of the organisation. Liquidity is expected to take care of regular (quarterly/annual) requirements for religious events and other annual expenses. While saving for long term purposes, clients prefer a lock-in mechanism, otherwise they might withdraw/misuse the money.

Market Segmentation

The following youth segments emerged from the research:

Segment	Key Characteristics
Segment I: Age group 15- 20	 Mostly students Unmarried Dependent on parents Financial needs linked to aspirations Need for regular finance: primarily savings Financial transactions happen around "Youth Clubs"
Segment II : Age group 21- 25	 Newly married 1-2 child of 1-2 years age Aspirations to start businesses and/or build houses Mostly dependent on husbands Husbands often are migrating labourers More credit oriented
Segment III : Age group 26- 30	 Married Have 2-3 children of 5-6 years of age High affinity towards community based institutions Aspirations for child's future Often are self-dependent Mostly in shared goat/cow raising activity

Segment Preference Matrix

• Low interest • High retum • Shariah based retum • Opportunity cost • Low instalment	• Opportunity cost	•Maturity yielding to asset	Price
Neamess to home Secured medium Community processes Local administrator	Security of saving Doorstep delivery Fast and easy processing Capacity building training	• Annual events • Uniform group based	Service
•Monthly repayment • Short term loan • Working capital loan	• High Loan amount • Long tenn Ioan • Business capitalloan	• Maturity benefit • Saving for aspiration • Uneven amount of saving • Regular saving	Quality
25.20		15.00	•
25-30 years	20-25 years Market Segments : acro	15-20 years oss age	

Green: Most important product positioning attribute (amongst price, customer service and product quality) Amber: Moderately important product positioning attribute Pink: Not so important product positioning attribute Each of the three segments showed different sensitivities towards quality of product, customer service and price. The Segment Preference Matrix above highlights the preferences of the segments.

Conclusion

The market research highlighted some important characteristics:

- There is a general lack of financial literacy and awareness among the people;
- The youth is more inclined towards savings than credit;
- The community based savings and credit practices are predominant;
- Education and religious/community events are the main reasons for financial pressure for youth; and
- The financial behaviour of youth is further segmented based on their age and marital status.

Based on the findings, the following suggestions related to products were proposed:

Two Concepts • Flexible Weekly Savings product with lon term maturity yielding a lump sum to bu higher education or assets; and • Short Term Recurring Deposits to create savings culture and meet regula aspirational and festival expenditure needs.ProductChallenges • Ensuring long term trust; • Managing long-term funds; and • Switching savings from RoSCAs.Price• Savings return explained in terms of maturity amount and Shariah based retur would be popular.Promotion• Ensure visibility of the programme i village; • Creating culture around the programme; and • Village heads to be made integral part of th

• Some level of internal rotation of th
savings fund can be encouraged.

However, it is also identified that all products cannot be launched immediately and the implementing organisation needs to follow a systematic product development process to yield deep impact in the community.
